PERSONAL SUMMARY

Third-year Computer Science student in the process of achieving a bachelor's degree, seeking an opportunity to gain industry exposure and enhance technical skills in software development.

EDUCATION

California State University, Long Beach — Expected: August 2027
B.S in Computer Science — GPA: 4.0

Certificate: *Google Data Analytics*
Academic courses:
Data Structure | *Algorithms* | *Discrete Structure* | *Assembly Programming* | *Stochastic Computing*

PROJECTS

Dental Website with AI Chatbox | *Flask (Python)* | *HTML* | *CSS* | *JS* | SQL — *Personal Project*
Full-Stack Web Application

- Built a **full-stack web application** using **Python/Flask**, developing both frontend features and backend **RESTful APIs** for scheduling requests, user intake, and admin workflows.
- Engineered **user-facing GUI components** using **HTML, CSS, and JavaScript**, transforming functional requirements into responsive, data-driven interfaces.
- Developed and integrated application logic to **consume backend services**, validate user input, and manage structured data for scheduling and administrative workflows.
- Designed and integrated **relational databases (PostgreSQL, SQLite)** with structured schemas to support authentication, appointments, and reviews across environments.
- Added an **AI-powered chatbot feature** to support real-time user inquiries, demonstrating experience integrating external services into backend systems.
- Improved application reliability through structured **debugging log** and **version control** with Git.

Restaurant Recommendation and Management System | *C++* | — *Group Project*

- Designed and implemented a C++ console-based restaurant recommendation system with a menu-driven UI enabling search, favorites, rating, and personalized suggestion features.
- Utilized multiple data structures including **linked lists, arrays, stacks, vectors, and priority queues.**
- Implemented **file I/O** for persistent storage of restaurant data and user preferences.

EXPERIENCE

Webmaster Intern – Women in Tech Club, CSULB — *February 2026 - present*

- Maintain and enhance the organization's website using **HTML, CSS, and JavaScript**.
- Increase event visibility by regularly updating homepages and announcements.
- Improve **user experience** (UX) and **visual design** to maintain a professional digital presence.
- Independently troubleshoot technical issues, reduce broken links and content errors by monthly audits.
- Manage a key communication platform representing the club to students, faculty, and industry partners.

ACHIEVEMENT & LEADERSHIP

- **President's Honor List**, California State University, Long Beach – Fall 2025
- **WIC** active member participating in technology-focused events and professional development programs.
- Selected participant in **SISTERHOOD Program**, a mentorship and leadership development initiative.

TECHNICAL SKILLS

Languages: Python, C++, C, SQL, HTML, CSS, Assembly (MIPS), F#
Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, REST APIs, File I/O
Tools: Git, Bash, GitHub, PostgreSQL, SQLite, VSCode, Visual Studio 2022, Linux CLI
